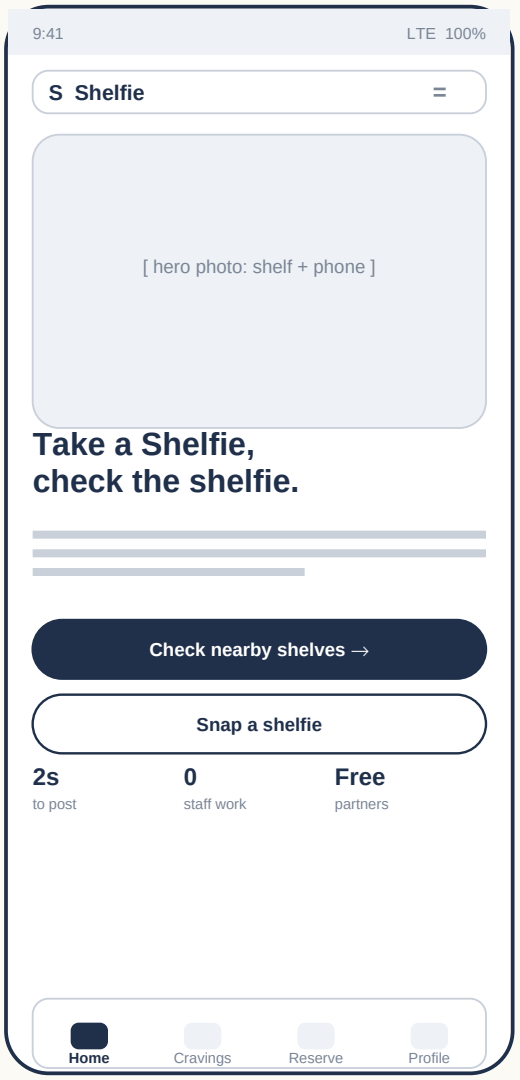
Shelfie — Mobile Wireframe

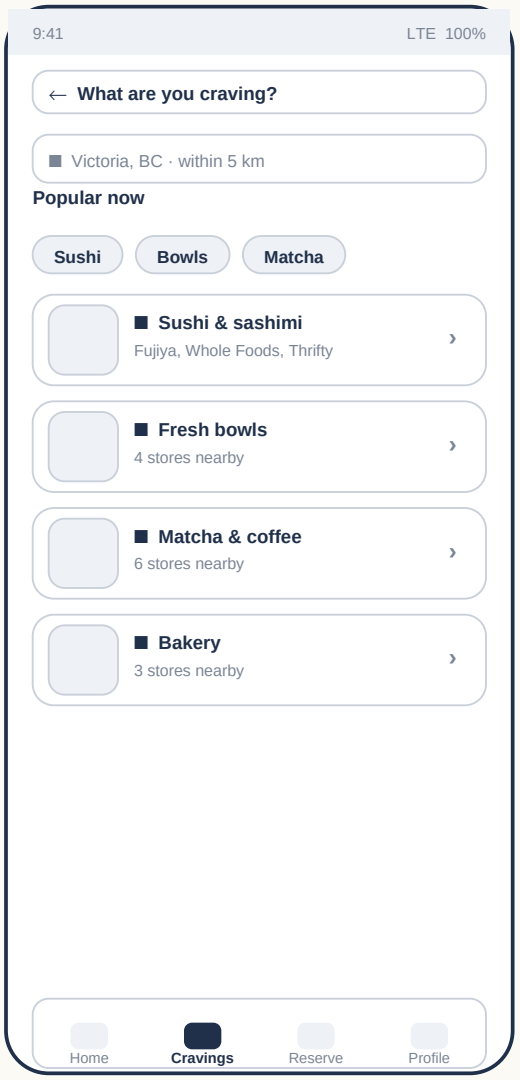
Page 1 of 3 · Core discovery flow · 375x812 @1x, single-column, thumb-reachable primary actions

01 · Home / Landing



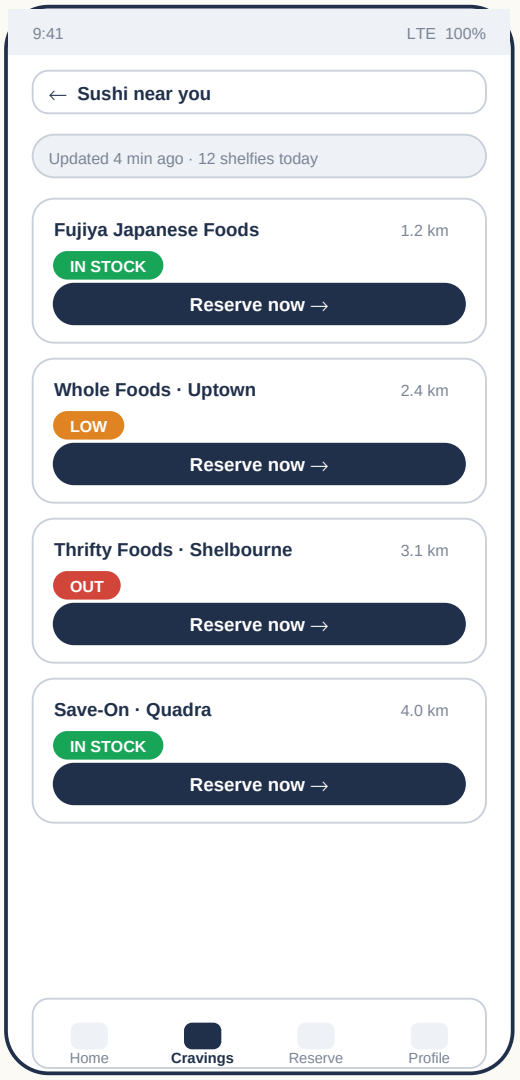
Hero + one primary CTA. Sticky bottom tab bar. Everything above the fold reachable with one thumb.

02 · Cravings picker



Horizontal chip scroller replaces desktop grid. Location bar pinned under header.

03 · Live shelf status



One status pill per store (In stock / Low / Out) + Reserve now. Whole card is tappable.

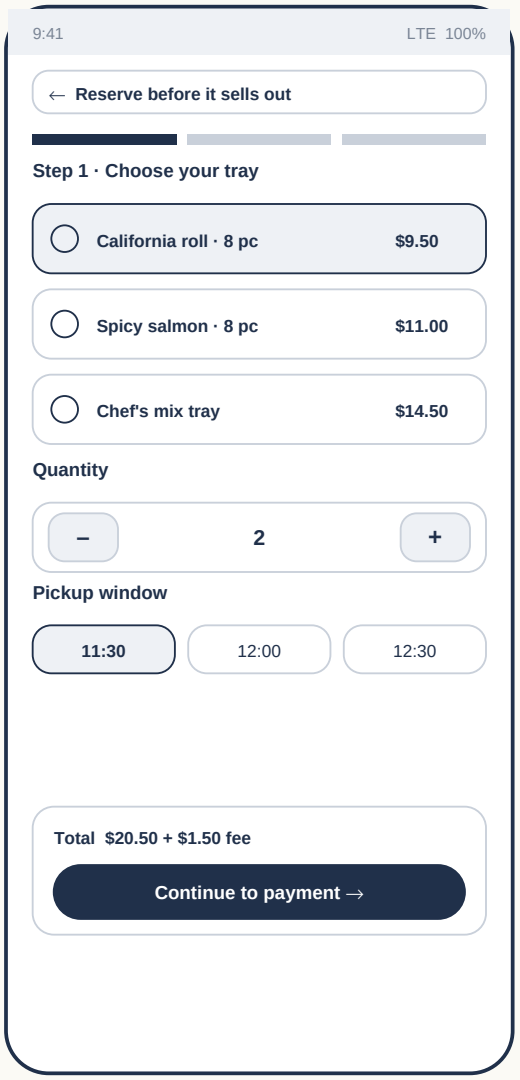
Mobile-first rules applied on this flow

- Single column at 375px; content gutters 16px, cards full-bleed minus gutter.
- Primary action at least 44px tall and inside the bottom third of the screen.
- Status uses one pill per store — colour + text label, never colour alone (accessibility).
- Sticky bottom tab bar (Home / Cravings / Reserve / Profile) replaces the desktop top nav.

Shelfie — Mobile Wireframe

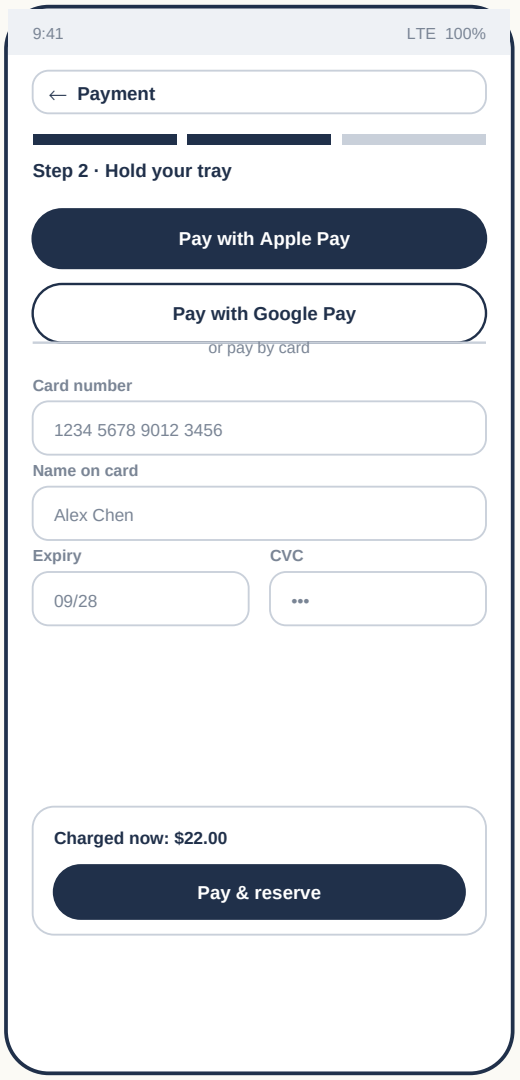
Page 2 of 3 · Reserve & confirm (Shelfie Guarantee) · progressive 3-step flow, one decision per screen

04 · Build order



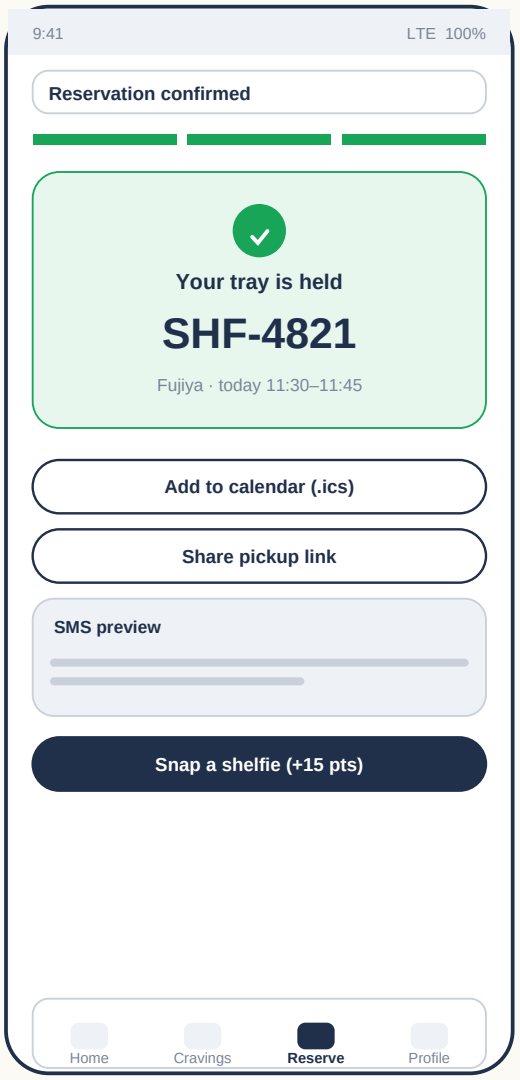
Step 1 of 3. Stepper at top, quantity stepper with big +/- targets, sticky summary CTA.

05 · Payment



Numeric keypad fields, autofill-friendly, Apple/Google Pay first so most users never type a card.

06 · Confirmed



Big pickup code first, then add-to-calendar / share. Screenshot-friendly at the top of the screen.

Flow notes

- One decision per screen; progress stepper persists so users know there are exactly 3 steps.
- Sticky bottom summary card keeps price visible while the form scrolls under it.
- Wallet buttons before the card form — card fields are the fallback, not the default.
- Confirmation leads with the pickup code (largest type on the screen) for a quick screenshot.

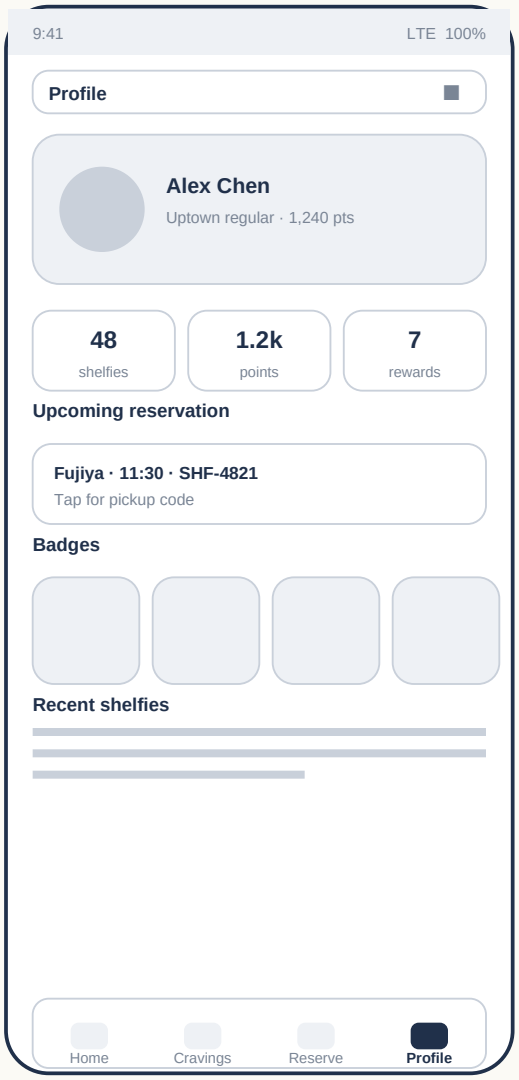
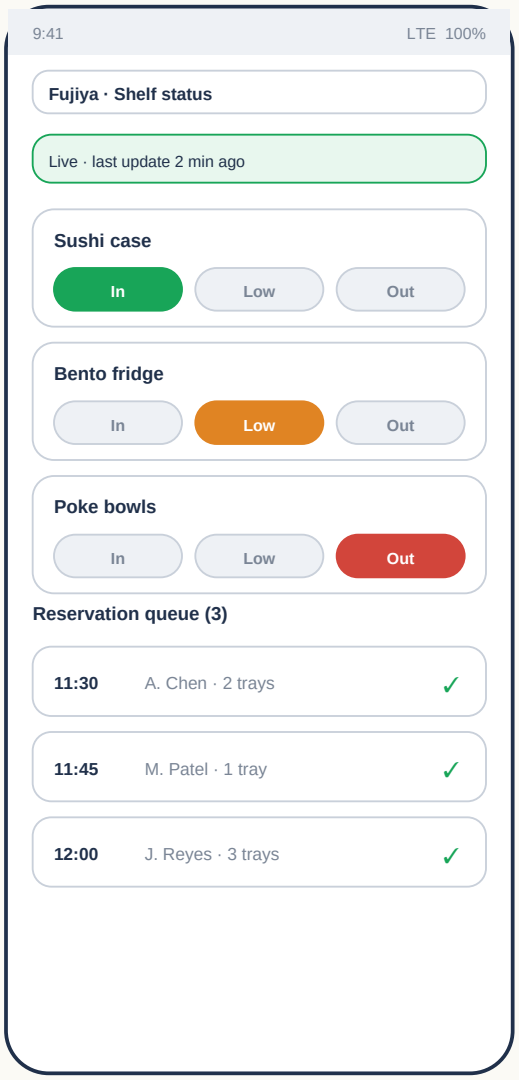
Page 3 of 3 · Profile, merchant view & mobile component kit

07 · Profile



Avatar + points header, then stacked cards. Horizontal scroll for badges instead of a grid.

08 · Merchant (mobile)



Store staff view: one big toggle per shelf + reservation queue. Designed for one-handed use behind the counter.

09 · Mobile component kit

Status pills (colour + label)

IN STOCK · RUNNING LOW · SOLD OUT

Buttons · min 44px tap height

Type scale (mobile)

H1 · 28/32 headline

H2 · 20/26 section

Body · 16/24

Caption · 13/18

Grid

375px · 16px gutters · 1 column · 8px spacing base

Breakpoint behaviour

- 320–479px: single column, full-width buttons, chips scroll horizontally.
- 480–767px: same single column, larger type and 2-up stat/badge grids.
- 768px+ (tablet): cards become 2 columns and the bottom tab bar promotes to a top nav.
